

See to Solve Flow™

Process Mapping For The Modern, Distributed Workforce

See to Solve Flow™ enables business architects to design, visualize, and analyze processes with information-rich workflow maps, and collaborate, real-time to improve them.

Design Information-Rich Process Maps

- Specify roles and responsibilities
- Make hand-offs and connected activities visible
- Embed inputs, outputs and standard work
- Map processes in swim lanes along a horizontal time axis

Collaborate & Explore Together

- Access, view and edit process maps simultaneously
- Get your team aligned
- Provide training on new processes with clarity and precision
- Zoom in and out of processes

View Complex & Inter-Connected Workflows

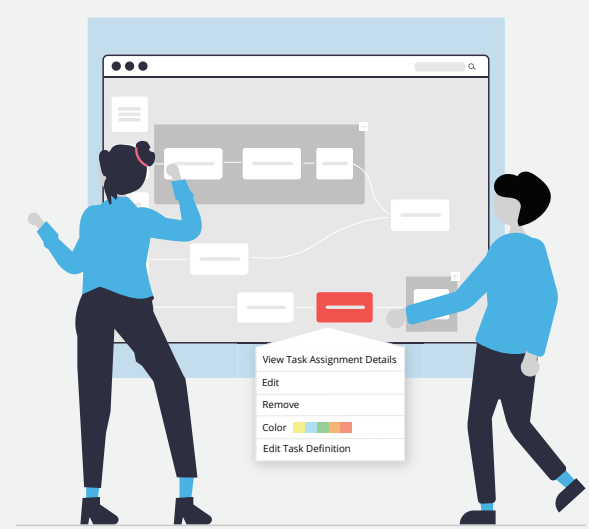

- View processes from different organizational levels
- Link multiple maps together for an organization-wide perspective
- Show a map from a particular person's or role's perspective using Focus View™

Trusted by World-Class Organizations

A Living, Actionable Map of Your Processes

Remove ambiguity with shared visualization of the interdependent people and activities that drive your organization with **See to Solve Flow™** process maps.

The illustration shows two stylized human figures, a woman on the left and a man on the right, both wearing blue shirts and dark pants. They are standing in front of a large digital screen that displays a process map. The map consists of several rectangular boxes connected by lines, representing a workflow. One box is highlighted in red, and a context menu is open over it, listing options: 'View Task Assignment Details', 'Edit', 'Remove', 'Color' (with a color palette), and 'Edit Task Definition'. The background is a light gray.

Monitor processes to understand, learn and improve

See what's happening with your processes in real-time, with visual indicators of where problems are occurring.

- Identify tasks as invalid or single points of failure with clear visual indicators on the map
- Embed issue tracking with cross-links to Jira or other ticketing systems
- Swarm performance issues with visibility into where issues are actually occurring

Benefits

- ✓ **Collaborate More Easily**
Design or explore a map with your team in real time, with clear indicators for who is editing which objects. Share maps with stakeholders from everywhere there are people involved.
- ✓ **Gain a Deeper Understanding of Your Processes**
Clearly define every activity, with support for multiple suppliers, varied inputs, process details and handoffs.
- ✓ **Visualize Workflows from Different Perspectives**
Flexible viewing options enable you to look at process maps from many different perspectives, from big picture overviews, to the smallest details of processes and sub-processes.
- ✓ **Clarify Responsibilities with Structured Swim Lanes**
Easily highlight the links between roles and activities using the unique guidelines of structured swim lanes.
- ✓ **Capture Organizational Learning and Improve Faster**
Living, actionable maps reflect the best knowledge of how things work. Using them to track issues and conduct root cause analysis speeds problem resolution and accelerates continuous improvement.
